

SEMINARS

Seminars for AIA CES Credits

WI Directors of Architectural Services can provide the seminars below at architects' offices.

To request that a seminar be provided, use the form on the reverse.

Woodwork Institute is an AIA CES Registered Provider.

North American Architectural Woodwork

Standards (WI0001.1) presents an overview of the latest North American Architectural Woodwork Standards and highlights how to use the quality and methodology of the Standards to ensure proper specifications. (HSW)

Architectural Millwork Quality Issues

(WI0002) provides a general look at typical problems with cabinets and millwork, along with installation, that our inspectors find. Many of these are problems that may not be obvious to the eye, but can show up over time. It also provides suggestions in how to specify and detail the millwork to help avoid these issues. (HSW)

Submittal Requirements and Site Conditions

(WI0003) covers what to look for in reviewing cabinet and millwork shop drawings. This includes which elements are required for certification, and a look at the things that are left out but should be essential. This seminar also covers climatization requirements for installation of cabinets and millwork, and some of the changes due to green building standards. (HSW)

Specifying Architectural Millwork

(WI0005) has two variants. One is more concerned with plastic laminate casework, and the other covers more information on wood veneers. Both provide detailed information to help understand what information needs to be provided to the fabricators to ensure the finished product matches the design intent. (HSW)

Wood as a Sustainable Material

(WI0008.1) provides background on the sustainability of wood products, current forestry practices, the carbon footprint of building materials and threatened North American wood species. (HSW)

Common Pitfalls in the Design of Accessible

Casework (WI0009) provides California ADA credit as well as AIA units. The combination of California and Federal requirements leads to some easy to miss problems with casework design. This seminar covers those problems, and has some suggestions on ways to take the sting out of compliance. (HSW)

Certified Seismic Casework Installation

(WI00010) covers an OSHPD and DSA pre-approved set of engineering for the installation of casework. This program takes the onus off of the design team for providing seismic engineering of the attachments. As plan check personnel come up with new requirements, this covers them with a certified and inspected program. (HSW)

Net Zero Millwork Issues

(WI00011) covers issues and solutions with millwork in non-traditional HVAC environments. New low energy use systems can lead to wider temperature and humidity ranges in buildings, and millwork design and specification need to react to those conditions. Allowing for increased movement and issues with dissimilar materials are some of the topics covered. (HSW)

Woodwork Institute Seminars for AIA CES Credits

At your convenience, the Woodwork Institute will conduct a seminar for one or more attendees at your location. Presentations may vary from 45 minutes to several hours; you may choose the length of time. The Woodwork Institute is a Registered Provider of the American Institute of Architects (AIA), and its Continuing Education System (CES) program.

Seminar Topics (choose as many as you'd like):

- North American Architectural Woodwork Standards (HSW)
- Architectural Millwork Quality Issues (HSW)
- Submittal Requirements and Site Conditions (HSW)
- Specifying Architectural Woodwork (HSW)
- Wood as a Sustainable Material (HSW)
- Common Pitfalls in the Design of Accessible Casework (HSW)
- Certified Seismic Casework Installation (HSW)
- Net Zero Millwork Issues (HSW)

Will attendees be applying for AIA-CES credits? Yes* No
* If yes, we will need their AIA membership number at time of seminar.

Requested Presentation Date: _____ Time: _____ Number Attending: _____

Name of Firm: _____ Phone: _____

Name of Contact: _____

Address: _____

E-mail Address: _____
